

SUBJECT INDEX

A

- Absorption, *see* Foliar absorption, Roots
- Activation analysis,
for cobalt and vanadium, 115
- Adaptation,
of rhizobia, 586
to unfavorable conditions, 118-120
- Adsorption,
of ions by roots, 65
- Alcohol dehydrogenase, 468-469
- Aldehyde oxidase,
role of molybdenum in, 483, 493
role of nitrate in, 493
reactivation by silicomolybdates, 493
- Aldolase,
iron content of, 482
- Alginate acid,
composition of, 683
effect on soil aeration, 691
- Alkali metals, 318-322
biochemical functions of, 321-322
see also individual metals
- Allylthiourea,
inhibitor of soil nitrification, 709
- Aluminum, 3, 52, 326-328
general effects of, 326-328
toxicity in soil, 52
- Amines in soil,
conversion to nitrate, 712-713
toxicity to plants, 700
- Amino acids, *see also* names of specific amino acids
as nitrogen sources, 55, 559
in bleeding sap, 595-596
effects of nutrient status on, 299-318
excretion from nodules, 602
for deficiency effects on, *see* individual nutrients, 305
in nitrogen fixation, 635
in nodules of nonleguminous plants, 634
in soil, 27, 699-700
inhibition of root uptake of, 730
leaching from plants, 96
metabolism of in soil, 713
nitrogen sources for rhizobia, 566
toxic effects on plants, 700
- Amino acid synthesis,
in plants and animals, 637
- Amino sugars,
in soil, 27
- Ammonia,
formation by rhizobia, 566
inhibitor of nitrogen fixation, 556-557
occurrence in soil, 49, 699
product of nitrogen fixation, 635, 637
role in nitrate assimilation, 393-394
utilization by microorganisms, 376-379
- Ammonium
inhibitory effect on nodulation, 607-608
- Ammonium ion,
product of amino acid metabolism, 700
- Ammonium nitrogen,
in rain water, 540
- Ammonium sulfate,
rate of nitrification of, 702
- Amylase,
calcium ions in, 511
- Apical meristems,
boron deficiency effects, 241
- Arginase,
activating ions, 454
- Arginine,
conversion in soil, 713
- Arsenic,
in soils, 37
- Ascorbic acid,
effects of molybdenum on, 284-285
in root nodules, 617
non-enzymatic autoxidation, 455-456
- Ascorbic acid oxidase,
catalytic activity of, 474-475
reaction in activation of, 475
reactions of, 472
role of metal ions in, 456, 475
- L-Aspartic acid,
as nitrogen source in aseptic cultures, 602
in nutrition of peas, 596

Autotrophic nitrification, 701-703
 Auxins,
 effects of minerals on, 237-239
 in the rhizosphere, 731-732
 relationships to zinc, 465-466
 removal of calcium by, 510
 role in nodule formation, 573
 Azines, 643
Azotobacter,
 soil-plaque technique, 77

B

Bacteria,
 essentiality of cobalt in, 506
 Bacteriophage,
 calcium ions in, 510
 Bacteroids,
 function in nodules, 622-625
 morphology of, 624
 Base exchange,
 in soils, 21-22
 Baule unit,
 definition of, 77
 Beneficial elements, 318-329
 functions of, 321-322
 Biliverdin,
 product of pigment degradation, 615-616
 Biotin,
 growth stimulator for rhizobia, 566
 reactions of in soil, 26-27
 Blue-green algae,
 nitrogen fixation by, 542, 544
 Borate,
 complexing property of, 500
 Boron,
 deficiency symptoms, 240-244, 246-257, 499-500
 effects on absorption and translocation, 263-264, 500
 effect on cell walls, 263-264, 501
 effects of deficiency on enzymes, 499-500
 effect on nitrogen compounds, 308
 effects on nodule development, 609
 enzyme inhibition, 266
 field disorders due to, 36
 in inositol synthesis, 500

 interaction with other elements, 257-258, 500-502
 occurrence and essentiality of, 34-35, 102, 499-502
 possible functions of, 499-502
 relation to carbohydrate metabolism, 261-266
 relation to growth and water content, 258-261
 relation to nitrogen metabolism, 261
 relationships with calcium, 501-502
 relationship with light, 267-268
 removal from reagents, 112
 role in microorganisms, 425
 role in plants, 268-270, 500-501
 toxicity, 35, 244-246

C

Calcium,
 as an enzyme activator, 511
 deficiency effects and symptoms, 30, 155-172
 effects on chromosomes, 171
 occurrence and availability in soil, 30
 occurrence in plants, 509-510
 relations to certain ecotypes, 30, 118
 replacement by strontium, 106
 requirements of microorganisms, 402-408
 requirement for nitrogen fixation, 564
 role in phage, 510
 uptake from soil, 57-58
 Calcium status,
 of different leaves, 85
 Carbohydrate metabolism,
 effect of boron on, 261-266
 effect of nutrition on, 186-192
 in soil, 679
 role of magnesium ions in enzymes of, 512
 Carbohydrate-nitrogen ratio,
 and nodule formation and nitrogen formation, 605-606
 as a determinant of nitrogen fixation, 695, 697
 Carbohydrates,
 as energy source for growth and nitrogen fixation, 554-555

- effects of potassium deficiency on, 180-183
- in soil, 43, 678-679
- Carbon, biological importance of, 3
- Carbon dioxide, substances which catalyse the hydration of, 470
- Carbon metabolism, effects of copper on, 226-228
- of nitrogen-fixing organisms, 554
- Carbon monoxide, inhibiting effects on nitrogen fixation, 562
- Carbon to nitrogen ratio, in the soil, 27, 674-675
- Carbonic anhydrase, in plants, 469-470
- Catalase, iron in, 481
- Catalysis, types of bonds and, 460-461
- Catechol, nonenzymatic autoxidation of, 455-456
- Cations, fixation in soil, 48-51
- relationships in plants, 58-60
- role in decarboxylations, 457-458
- uptake by plants, 58, 61-62
- Cell division, effects of mineral nutrition on, 249-253, 500
- stimulation in nodules, 576
- Cell elongation, effect of calcium on, 161-162
- Cell permeability, effects of calcium on, 170, 510-511
- Cell walls, effect of mineral nutrition on, 167-170, 246-252, 254, 263-264
- Cellulose, resistance to enzymatic attack, 680-681
- esters of, 692
- Cellulose breakdown, enzymes of, 679-682
- by thermophilic bacteria, 682
- by wood-destroying fungi, 686-687
- Chelate complexes, metal ions in, 463-464
- stability of, 461
- Chelating agents, to purify media, 114
- Chlorine, 292-299
- deficiency symptoms, 292-295
- essential nature of, 103-104, 517-518
- and nitrogen metabolism, 315-316
- replacement by bromine, 295-296
- Chlorophyll, effects of copper on, 478
- effect of day length on, 604
- effects of potassium on, 202-204
- Chlorosis, causal factors, 172-173, 192-194, 198-199, 205-206, 212-213, 215, 498
- induction by metals, 498
- Choleglobin, *see* Nodule pigments
- Citric Acid Cycle, *see* Tricarboxylic Acid Cycle
- L (+)-Citrulline, in nodules of alder, 634
- Clay minerals, structure, characterization and function in soils, 39-42, 46, 50, 60, 63
- Cobalt, activation analysis of, 115
- availability and deficiency in soil, 36-37
- effects on nitrogen fixation, 36, 105, 506, 609
- essentiality for animals, 36, 504-506
- general effects of, 322-326
- removal from reagents, *see* Reagents, 111-112
- role in plants and bacteria, 104, 504, 505, 506
- Complementary ion effects, 56-58
- Copper, and plant enzymes, 471-478
- as an essential element, 84, 102, 471
- covalent complex, 475
- deficiency and deficiency effects, 33, 222-229, 305, 477
- effect on carbon metabolism, 226-228
- in photosynthesis, 477-478
- in synthesis of iron porphyrins, 478
- interactions with other elements, 228-229
- occurrence in soil, 32-33
- removal from reagents, *see* Reagents,

- role in microorganisms, 412-415
 role in oxidation-reduction, 455-456,
 473
- Coumarin,
 breakdown by soil microorganisms, 733
- Covalent linkages, 461
- Culture containers, 109-110
- Culture media,
 impurities in, 109-115
- Culture methods,
 applications to edaphic factors, 116-120
- Culture solutions,
 removal of trace elements from, 368-
 369
- Cysteine in soil,
 inhibitor of nitrification, 705
 oxidation to sulfate, 722
- Cytochrome oxidase,
 inhibition of, 476
 role of copper in, 476-477
- Cytochrome system, 613-621
 in root nodules, 621
- Cytochrome C₃,
 role in sulfate reduction, 723
- Cytochromes,
 electron transport capacity of, 479-480
 in nitrate reduction, 491-492
- Cytochrome c reductase, 490
- D**
- Decarboxylation,
 nonenzymatic, 457-459
- Denitrification,
 criteria for in soils, 714-715
 definition of, 697, 714
 hydrogen acceptors in, 715
 role of nitrous oxide in, 716-717
- Deoxyribonucleic acid,
 effects of heavy metals on, 119-120
- Depolymerase,
 hydrolysis of polygalacturonic acids by,
 684
- Dextrans,
 affect on soil structure, 690
 occurrence in soil, 685
- 2,4-Dichlorophenoxyacetic acid,
 as a selective herbicide, 733
- Diphosphopyridine nucleotide (DPN),
 467, 468, 487, 494, 496, 499, 512, 716
- DPNase, 467
- DPN-cytochrome c reductase, 481
- E**
- Electron transfer,
 metals associated with, 521-522
 model of, 456-457
 role of copper in, 473
 role of iron in, 479-480
 role of molybdenum in, 489-490
 role of sulfur in, 517
 scheme of in nitrate reduction, 492
- Enolase,
 inhibition of, 464
- Enzymatic decarboxylation, 459
- Enzymes,
 chelate binding to pyrophosphate, 464
 effects of minerals on, 266-267, 283-
 284, 290-292, 454, 467-468
 inhibition of, 428-429
 metal activation, 454, 462-464, 495-
 496, 506
 metal requirements of, 454, 464-465
 role of boron in, 499-500
 role of copper in, 471-473
 role of zinc in, 466-468
see also individual enzymes
- Essential elements,
 classification of, 1-3, 108, 364-366
 criteria of essentiality, 365
see also individual elements
- Ethylenediaminetetraacetic acid, 92
- F**
- Fatty acids,
 products of cellulose degradation, 681-
 682
- Ferrous oxidation,
 in soil, 742
- Fertilizer requirements,
 chemical and tissue tests for, 86, 88-89
- Field experimentation,
 development of, 65-66
 limitations on, 71-72
 techniques of, 66-72
- Fixed nitrogen,
 transfer from nodules to plants, 593-
 598

Flowers,
effects of mineral nutrition on, 232-
233, 244, 273

Fluorine, 37, 329

Foliar nutrition, 91-96
absorption of minerals, 93-95

Fruits,
effects of mineral nutrition on, 244

Fulvic acid,
in soil humus, 674

Fumerase,
anion activation of, 462

Fungi,
effects on rhizobia, 591-592
species capable of fixing nitrogen, 374

G

Gallium,
role of in microorganisms, 421

Germanium, 329, 500

Glycerol,
inhibitor of nitrification, 704

Glycine,
nitrification of in soil, 704

Glycolysis,
metalloenzymes of, 518-519

Growth,
correlation with S values, 83
"critical nutrient level" for, 82
dependence on pH, 568-569
effects of humidity, temperature, and
pH on, 553-554
effects of mineral nutrition on, 82, 184-
186, 194-195
see also individual elements for their
effects on growth

Guaiacylpropane,
in lignin, 676

Guanidine,
inhibitor of nitrification, 709

Gums,
production of by rhizobia, 567

H

Hematin, 604, 613

Heme,
roles of, 457
structure of, 479

Hemicelluloses,
composition of, 682-683
decomposition by soil fungi, 683
hydrolysis by hemicellulases, 684
in microorganisms, 684

Hemocuperin, 475

Hemocyanin, 475-476

Hemoglobin,
conversion to choleglobin, 617
occurrence in plants, 480, 612
role in nitrogen fixation, 563
see also Pigments

Herbicides,
inhibitors of nitrification, 708-709
selective role of 2,4-dichlorophenoxy-
acetic acid, 733

Heterocysts, 551-552

Hill reaction,
inhibition of, 477-478
role of manganese in, 221-222

Humic acid,
in soil, 672-673

"Humin," 674

Humus,
definition of, 42, 673
formation of, 672-673

Humus theory, 19-20

Hydrazine,
in nitrogen fixation, 643
reduction by hemoglobin, 620
toxicity of, 558

Hydrogen,
electron donor in nitrogen fixation, 485
inhibitor of nitrogen fixation, 485, 556

Hydrogen bonding,
in soil, 690

Hydrogenase,
iron in, 481, 561, 565
molybdenum in, 481, 564
role in nitrogen fixation, 485, 560-561

Hydroxylamine,
inhibitor of nitrification, 712
in nitrate reduction, 391-393
in nitrogen fixation, 558, 637, 639
oxidation of in soil, 712
reduction by leghemoglobin, 620, 639-
640

Hydroxylamine reductase, 557-558

Hyponitrite,
as nitrogen source, 390-391

in nitrogen fixation, 559
Hyponitrite reductase, 557

I

β -Indolylacetic doleacetic acid,
breakdown by soil microorganisms, 733
secretion by bacteria, 572
uptake of by roots, 510
Indoleacetic acid oxidase, 478
Inositol phosphates,
occurrence in soil, 28
Iodine,
essential element for animals, 508
in soils, 37
Ion exchange, 45, 56, 58-59
Ion exchange resins,
in water purification, 110-111
Ion interaction,
in microorganisms, 400-402
Ionic bonds,
in catalysis, 460-461
Iron,
causes of deficiency, 32, 198-212
deficiency symptoms, 192-198, 306-
308, 482-483, 560
linkages in heme proteins, 479
occurrence in soil, 32, 478
in porphyrins, 478-479
relationships with other elements, 198-
212
removal from nutrient reagents, 112-
113
role in microorganisms, 411-412
role in oxidations, 456-457, 481
Isotopes,
assay method for cobalt and vanadium,
115
in nitrogen fixation studies, 546
use in foliar spray studies, 91-92
Isotopic dilution,
as a measure of nutrients in soil, 76-77

K

Kaolinite,
cation exchange capacity of, 42
crystal structure of, 41
formation of in soil, 39

α -Ketoglutaric acid,
in amino acid synthesis, 637
Kinetics,
of nitrogen fixation, 545
Krebs cycle, *see* Tricarboxylic acid cycle
Krillium,
effect on soil, 694

L

Laccase,
in lignin formation, 677
reactions of, 472
Latin square,
in field experimentation, 68
Leaves,
analysis of in nutritional studies, 83-86
as nutrient absorbing organs, 91-96
Legchologlobin,
green pigment of root nodules, 616
affinity for oxygen and carbon mon-
oxide, 618
change into a green pigment, 615-617
characterization of, 565, 611-612
conversion to choleglobin, 617
dark oxidation of, 627
isolation of, 610-611
in nitrogen fixation, 579-580, 609-610,
619-620
occurrence in plants, 612
and oxygen uptake, 619
Legumes,
growth related to nitrogen, 598-599
role in nitrogen fixation, 541-543
Levans,
effect on soil structure, 690
synthesis of, 685-686
Lichenases, 685
Lichenin, 685
Ligands, 461-463
Lignin,
aggregating effect of, 691
biosynthesis of, 676-678
breakdown in soil, 678
characterization of, 675-676
occurrence in soil, 673
Lignoproteinates, 675
Lithosphere,
occurrence of elements in, 28-35

M

- Macronutrient elements, 2, 27-32, 452
see also individual elements
- Magnesium,
as enzyme activator, 512
constituent of chlorophyll, 511
deficiency effects and symptoms, 31,
172-176, 312-313, 511
effects on plant composition, 175-176
occurrence in plants, 511-512
occurrence in soil, 30-31
removal from reagents, *see* Reagents
requirement in microorganisms, 402-
408
- Manganese,
as an enzyme activator, 494
biological oxidation of, 741-742
deficiency effects and symptoms, 34,
102, 212-222, 495, 498, 740
essential nature of, 101-102, 220-222,
494-499
in the tricarboxylic acid cycle, 495
interaction with iron, 497-498
occurrence in soil, 33-34, 740
in peroxidase-catalyzed reactions, 499
role in enzymatic decarboxylation, 495
role in microorganisms, 416-418
role in photosynthesis, 218-219, 221,
495-497
tests for, 115
toxicity of, 52, 215-217, 498
- Manganese cycle,
in soil, 741
- Manganese dioxide,
as an oxidant, 742
as a terminal hydrogen acceptor, 742
role of in soil, 724-725, 742
- Manganese metabolism, 740-742
- Manometry,
use of in soil studies, 739
- Membranes,
factors affecting permeability of, 236
- Mercaptans,
inhibitors of nitrification, 706-707
in soil, 722
- Mercaptoamino acids,
in soil nitrification, 706-707
- Metabolism,
effects of mineral nutrition on, 239-
240
- Metalloenzymes,
model systems for, 455-460
table of, 494
- Metals,
activation of enzymes by, 454, 462-
464, 495-496, 506
as catalysts, 462-464
combination with proteins, 462-463
effects on DNA, 119-120
in coordination complexes, 461
in electron transfer, 473, 479-480, 489-
490, 521-522
in nonenzymatic decarboxylation, 457-
459
role in photosynthesis, 518, 521
- Methionine,
decomposition of in soil, 722
inhibitor of nitrite oxidation, 711
inhibitor of soil nitrification, 705-706
- Methylamine,
inhibitor of nitrification, 712-713
- Michaelis-Menten equation,
in nitrogen fixation, 556
- Micronutrients,
biological tests for, 115-116
deficiency effects and symptoms, 192-
299
discovery of essentiality, 99-106
occurrence in soil, 2, 32-36, 38
quantitative requirements in plants,
109
sources of contamination, 109, 114-115
see also individual elements
- Microorganisms,
culture methods for, 366-372
effects of mineral toxicity on, 425-429
fixation of nitrogen by, 543-544, 697
growth inhibition by urethanes, 707-
708
in the rhizosphere, 688-689, 697-698,
726-727, 731
inhibition of growth of, 707
importance of cobalt in, 104-105
mineral deficiencies in, 369-371
mineral requirements of, 364-365
nitrate reduction in, 381-382
nitrification by, 396-398, 702, 714

- sulfate reduction in soil by, 723
 sulfur oxidation by, 719
 use in bioassay systems, 371-372
 utilization of nitrate by, 380-383
- Middle lamella,
 calcium pectate in, 510
- Mineral nutrients,
 soil tests for, 77-79
see also Macronutrients, Micronutrients
 history of, 3-6, 16-22
 and mutation, 119-120
see also individual nutrient elements
- Minor element,
see Micronutrient
- Mitochondria,
 effect of calcium on, 163
- Mitosis,
 effects of calcium on, 163-167, 170
- Mitscherlich equation, 58
- Molybdate,
 as inhibitor of acid phosphatases, 492
 inhibitor of *Neurospora*, 492-493
- Molybdenum,
 as an electron carrier, 489-490
 assay for reagent contamination, 115
 deficiency effects and symptoms, 270-292, 486-489, 492
 effect on nitrogen fractions, 287-289
 effect on phosphorus metabolism, 289
 essentiality in animals, 483, 493
 in nitrogen fixation, 102, 483-486, 563, 608-609
 in xanthine oxidase, 493
 occurrence in soil, 35-36
 removal from stock solutions, 112
 replacement in plants, 108-109, 484, 563-564
 role in green algae, 563
 role in microorganisms, 418-421
 toxicity effects, 36, 280-281, 493
- Monophenolase,
 action of, 472-474
- Montmorillonite,
 crystal structure of, 41, 42
- Morgan's reagent,
 extracting agent in tissue testing, 89
- Mucilaginous polysaccharides,
 characterization of, 683
- N
- α -Naphthylacetic acid,
 effects on root hairs, 731-732
- Nickel,
 relation to iron deficiency, 209-210
 toxicity, 37
- Nicotinamide adenine dinucleotide (NAD),
see Diphosphopyridine nucleotide
- Nicotinamide adenine dinucleotide phosphate (NADP),
see Triphosphopyridine nucleotide
- Nicotinic acid,
 as inhibitor of plant growth, 700
- Nitramide,
 intermediate in nitrogen fixation, 559
- Nitrate accumulation,
 effects due to mineral nutrients on, 281
- Nitrate assimilation, 490-491, 699
 ammonia in, 393-394
 inhibition of, 484
 nitrate reductase in, 491
 role of calcium in, 511
 role of manganese in, 498
 role of molybdenum in, 486-492
see also Nitrate reduction
- Nitrate nitrogen,
 effect on nitrogen fixation, 608, 698
 nodule formation, 607-608
- Nitrate reduction,
 general pathway of, 715
 pathways for electron transfer in, 490-492
 role of TPNH in, 487, 489, 715
 schematic representation, 383-384
- Nitrate reductase, 384-385, 386, 487, 490, 492, 557-558
 role of molybdenum in, 455, 483, 486-492, 564
- Nitrate respiration,
 cytochrome system in, 491
- Nitric oxide,
 as nitrogen source, 388
- Nitrification, 396-398, 701-709
 of ammonium salts, 702, 703
 chemical inhibition of, 701, 704, 705, 709
 from amino acids, 704-705

- Nitrifying bacteria in soil, 702,
see Microorganisms, nitrification by
- Nitrite,
 as nitrogen source, 387-388
 conversion of ammonium cations to,
 698
 heterotrophic formation in soil, 712
 oxidation in soil, 710-711
- Nitrite oxidation,
 inhibitors of, 705, 711-712
 inhibition by nitrourea, 711-712
- Nitrite reductase, 557
- Nitrite reduction,
 activation by copper, 477
 electron carriers and general scheme
 of, 387-388, 715-716
- Nitrogen,
 absorption from soil by plants, 28
 deficiency effects and symptoms, 140-
 143
 effects on growth, 140-143, 185
 excretion by free living nitrogen fixers,
 559-560
 in plant and animal nutrition, 6-9
 occurrence and transformations in soil,
 27-28
 oxidation-reduction states of, 394
- Nitrogen compounds,
 chlorine deficiency effects, 315-316
 effects on due to copper, 305
 factors affecting excretion from nod-
 ules, 601-602
 industrial production of, 540-541
 magnesium deficiency effects on, 312-
 313
 phosphorus deficiency effects on, 313
 potassium deficiency effects on, 308-
 312
 sulfur deficiency effects on, 151, 313-
 315
- Nitrogen cycle in soil, 697-698
- Nitrogen fixation,
 as a form of respiration, 553
 by *Aerobacter*, 548-550
 by *Azotobacter and Beijerinckia*, 372,
 375, 546, 548
 by algae, 372, 375, 484, 542, 544, 551-
 552
 by anaerobic bacteria, 555
 by cell-free extracts, 552-553, 628
 by *Clostridium*, 375, 548
 detection of, 544-546
 determining factors, 518, 545, 569, 571,
 590-591, 553-554, 606, 608
 early developments in, 542
 effects of calcium, 511, 564
 effect of carbohydrate to nitrogen ratio
 on, 697
 effect of cobalt on, 105, 326
 effects of copper on, 229, 414
 effects of ions on, 454
 effects of iron on, 614
 effects of molybdenum on, 273-274,
 418-420
 energy sources for, 554-555
 in excised nodules, 625-627
 general description of, 372-375, 697
 inhibition and inhibitors of, 484, 548,
 550-551, 560, 562, 606, 697-698
 isotope studies on, 546, 636
 mechanism of, 485, 635-645
 by Myxophyceae, 374
 non-biological, 540
 in non-leguminous plants, 628-633
 pathways of, 639, 644
 relation to growth, 552, 545
 in relation to nodule pigments, 480,
 612-613, 616
 replacement of molybdenum by vana-
 adium in, 503-504
 by rhizobia, 571
 in root nodules, 568, 576, 596
- Nitrogen fixing organisms,
 utilization of nitrate by, 557
- Nitrogen fixation by free-living organ-
 isms, 544-565
see also Microorganisms
see also individual organisms
- Nitrogen metabolism in soil,
 main processes of, 697-699
- Nitrogen metabolism,
 copper deficiency effects on, 305
 effects of boron deficiency on, 308
 effect of boron on, 261
 effects of chlorine deficiency on, 296-
 299
 effects of copper on, 226-228, 305
 effects of iron deficiency on, 306-308
 effects of molybdenum on, 287-292

- effects of nutrition on, 186-192, 270-271
 - effects of potassium deficiency on, 308-312
 - effects of zinc on, 238-239
 - manganese deficiency effects on, 305
 - role of the dicarboxylic amino acids, 636-637
 - zinc deficiency effects on, 305
 - Nitrogen nutrition,
 - early developments, 20-22
 - Nitrogen status of leaves,
 - effect of position and time of sampling, 85
 - Nitrogenase, 485, 561
 - Nitrous oxide,
 - assimilation of, 558
 - inhibition of nitrogen fixation, 558
 - product of denitrification, 714
 - role in microorganisms, 388-390
 - Nitrourea,
 - inhibition of nitrite oxidation, 711-712
 - Nodules,
 - amino acids in (*see also* Amino acids)
 - ascorbic acid in, 617
 - causal organism in non-legumes, 629-631
 - climatic effects on excretion from, 603-604
 - cytochrome system in, 621
 - cytology and histology of, 575-577
 - degeneration processes in, 623
 - effect of copper on nitrogen content of, 609
 - excretion of nitrogenous compounds from, 598
 - factors determining number of, 577-578
 - formation of, 572-576
 - occurrence on different plants, 579
 - pigments in, absorption spectrum of, 616
 - role of excised, 625-627
 - see also* Nitrogen fixation
 - Nodule bacteria,
 - cultivation in synthetic media, 565-566
 - Nodule formation,
 - effect of auxins on, 573
 - effects of boron on, 609
 - effect of combined nitrogen on, 606-609
 - effect of phages on, 592-593
 - effect of temperature on, 569-571
 - inhibition by ammonium, 607-608
 - morphology of the causal organisms, 513-514
 - Nutrient culture,
 - composition of culture solutions, 100-101
 - history of, 97-99
 - in sand, 98
 - water culture, 98-99
 - Nutrients,
 - atmospheric sources, 113-114
 - availability in soil, 26, 75-77, 96
 - determination of field requirements, 65-91, 106-109
 - fixation of in soil, 47-51

 - role of metals in, 455-457, 472-473
 - Oximes,
 - conversion to nitrate in soils, 712
 - function in plants, 394-395
 - utilization of by plants, 392
 - Oximino acids,
 - biological reduction of, 639
 - Oxygen,
 - inhibition of nitrogen fixation by, 553

effects of on rhizobia, 568
Oxygen consumption of soil, 710, 739

P

Pectase,
see Pectin methylesterase

Pectic acid,
composition of, 683-684

Pectin esterase,
see Pectin methylesterase

Pectin methylesterase,
action of, 684

Pectin polygalacturonase,
action of, 684

Pectinase,
see Pectin polygalacturonase

Pedology, 25-27

Pentose phosphate pathway,
metalloenzymes of, 518

Perfusion apparatus,
description of, 734-735

Perfusion technique,
metabolic studies with, 701-702, 738
in soil studies, 733-734

Peroxidases,
in cell metabolism, 480
in lignin formation, 677
properties of, 480

Phages,
effect on nodule formation, 592

Phospholipids,
occurrence in soil, 28

Phosphorus,
deficiency effects and symptoms, 143-
145, 146-149, 313

fixation in soil, 47-48
interaction with calcium, 143-145

occurrence in plants, 508-509

occurrence in soil, 28-29, 77

role in microorganisms, 398-400

uptake from soil, 64-65

Phosphorus metabolism,
effects of minerals on, 175-176, 238-
239

Photosynthesis,
in blue-green algae, 551-552
effects of copper on, 226-228, 477-478
relation to fixation and excretion of
nitrogen, 603-604

role of chlorine in, 296-299
role of cytochrome f in, 480
role of manganese in, 218-219, 221,
495, 497

role of magnesium in, 511

Photosynthetic bacteria,
nitrogen fixation by, 550-551

Photosynthetic phosphorylation,
role of magnesium in, 176

Phytic acid,
structure of, 509

Pigments,
in root nodules, 616
in nitrogen fixation, 480, 563, 612
see also Nitrogen fixation

Plant analysis, 72-91
see also Tissue testing

Plant nutrition,
history of, 3-12, 16-18

Plasmodesmata, *see* Foliar nutrition

Plastids,
effects of mineral deficiency on, 235

Podsol profile, *see* Soil

Polyelectrolytes,
effects of on soil, 693-694
stability of, 695-696

Polyphenol oxidase, 456, 471-472

Polysaccharides,
in soil, 690

Polyuronic acids,
composition of, 682-683
estimation of in soil, 684-685

Polyuronides,
characterization of in soils, 691
composition of, 683
relation to soil fertility, 683-685

Porphyrins,
iron in, 457
synthesis in nodules, 620-621

Potassium,
as an enzyme activator, 514
deficiency effects and symptoms, 173-
183, 308-312, 514

essential nature of, 30, 512, 514-515
fixation in soils, 48-49

occurrence in soil, 29-30

replacement by rubidium, 106, 515

replacement by sodium, 514-515

requirements of microorganisms for,
400-402

Potassium chlorate,
 as a bacteriostatic agent, 703

Probable error,
 equation for, 67

Prolidase, 463

Proteins,
 biological decomposition in soil, 43
 properties of polar side chains, 461-462
 role of metals in, 175, 179, 461-464,
 477, 508, 514

Protoporphyrin,
 as chlorophyll precursor, 483
 in root nodules, 620-621

Putrescine, 309-310

Pyridine nucleotide dehydrogenases,
 role of zinc in, 468-469

Pyrophosphate,
 in enzyme-coenzyme linkage, 463-464

Pyruvic kinase,
 activation by potassium, 514

Q

Q₀₂,
see Respiratory quotient

R

Randomized block,
 design of field plot, 68

Reagents,
 purification of, 111-113, 368-371

Redox potential,
 influence on nitrogen fixation, 617

Respiration,
 efficiency coefficient of, 567
 effect of manganese on, 219-220
 effects of mineral nutrition on, 186-
 192, 195-198
 effects of molybdenum on, 281-283
 inhibition by hydrazine, 558
 inhibition by urethanes, 707-708
 in rhizobia, 568

Respiratory quotient,
 of rhizobia in culture, 567-568
 relation to nitrogen fixation, 555-556

Rhizobia,
 and biotin, 566
 antibiotic effect of bacteria on, 591
 change to bacteroids, 624

classification based on host plant, 585-
 586

competition among strains, 587-591

dependence on combined nitrogen, 543

effectiveness in nitrogen fixation, 580,
 582-585

growth-pH relationship, 569

life cycle of, 571

metabolism of, 568

nitrogen sources for growth, 566

Rhizosphere,
 amino acids in, 729-730
 antifungal agents in, 731
 auxins in, 731-732
 definition, 13, 726
 factors affecting microflora of, 730-731
 microorganisms in, 726, 727
 nutrients in, 727
 organic substances in, 730

Ribonucleoproteins,
 effects of metals on, 119, 120, 218

Roots,
 cation exchange properties, 60-62
 effects of mineral deficiency on, 159-
 162, 233, 235
 effects of mineral nutrition on, 244,
 247-250, 280
 infection by rhizobia, 572-574
 "law of the maximum," 80
 "law of the minimum," 80
 nitrogen metabolism of, 598
 nutrient uptake by, 52-65

Root hairs,
 effect of α -naphthylacetic acid on, 731-
 732
 sites of rhizoboid infection, 572

Root nodules,
 nitrogenous compounds of, 595
see also Nodules

Rubidium,
 functions of, 320-321

S

S values,
 definition of, 83
 in growth studies, 83

Salt uptake,
 role of zinc in, 471

Sand culture,
