

FOREWORD

The Fifth International Instruments & Measurements Conference September 13–16, 1960, continued a tradition which started in the early Forties. Through international conferences and exhibitions in Stockholm news concerning instruments and other apparatuses for measuring has been presented to scientists and engineers. These events have enjoyed widespread interest in many countries and had participants from all over the world.

The 1960 Conference, which was sponsored by the Royal Swedish Academy of Engineering Sciences and the Swedish Association of Technical Physicists, included 120 lectures divided into the following sections:

1. Automatic Process Control,
2. Physical Methods of Chemical Analysis,
3. Nuclear Instrumentation,
4. Measurements of Electric and Magnetic Quantities,
5. Reactor Control.

It is a great satisfaction for the organizers of the Conference that the Proceedings are now available in a fine edition published by the Academic Press. We are grateful to the lecturers, who willingly have contributed to the Conference and to the Proceedings. Through the indefatigable work of Mrs. Vera Reio, it has been possible to present the Proceedings within a relatively short time.

GREGORY LJUNGBERG
President of the I & M Conference

Stockholm, March 1961
