

Subject Index

A

- Achlya, hormonal control of sexual reaction in, 119, 120
- Acids,
 auxin action and organic, 61
 wound hormone activity of dicarboxylic, 81
- Acrasiales, nature of aggregation stimulus in, 120
- Acrasin, 121
- Adenine, leaf growth activity of, 101
 as plant hormone, 122
 root-forming activity of, 33, 113
- Aeschynomene indica*, isolation of wound hormone from, 81
- Ailanthus, isolation of hexenal from, 84
- Allatectomy,
 effect on egg development in insects, 144
 on Lepidoptera larvae, 137
 on postembryonic development of insects, 136, 137
 on tissue growth, 150
- Amino acids,
 leaf growth activity of, 101
 root-forming activity of, 113
 transport through plant tissue, 24
- Ammonium, effect on root formation, 33
- Anethum graveolens*, day lengths required for flowering, 86
- Anthraceneacetic acid, rate of absorption of, 24
- Antivitamin, indoleacetic acid as, 19
- Aphids, occurrence of auxin in, 20
- Apples, prevention of premature dropping by auxin treatment, 42
- Ascorbic acid, growth activity in plants, 109
- Asparagine,
 leaf growth activity of, 101
 root-forming activity of, 113
- Auxenolonic acid, identity with auxin b, 12
- Auxentriolic acid, identity with auxin a, 12
- Auxin a,
 activity of esters of, 16, 17
 chemical nature of, 11, 71
 conversion to pseudoauxin a, 12
 effect on root formation, 32
 empirical formula, 11
 identity with auxentriolic acid, 12
 interaction with indoleacetic acid, 33
 isolation from cereal grains, 19
 role of, in phototropism, 29
- Auxin a lactone,
 conversion to "pseudoauxone," 12, 29
 effect of carotene on photoinactivation of, 29
 structure of, 12
- Auxin b,
 chemical nature of, 11, 71
 effect on buds, 35
 on root formation, 32
 empirical formula, 11
 isolation from cereal grains, 19
- Auxin precursors,
 inhibitory effect on growth of *Avena* coleoptile, 20
 isolation from plant tissues, 18-20
 mode of action, 21
 nature of, 17-21, 71-72
 transport of, 18
- Auxin protein complexes, 19, 60
- Auxins, see also Caulocaline; Florigen; Hormones, plant, growth; 3-Indoleacetic acid; Rhizocaline; etc.
 action mechanism, 21, 40, 51, 61, 70, 75-76
 antagonism between, and flower-forming hormone, 97 ff.
 antiflowering action of, 96-98
 as root-forming hormone, 31, 32

- assay by curvature tests, 4-11, 16, 26, 33, 37 ff., 97
 by other methods, 11, 70-71
 catalytic action of, 61
 chemical and physical requirements
 for activity, 15-19
 chemistry of, 11-22
 concentration and activity, 40, 42, 47
 conditions of upward transport of, 26
 content of legume root nodules, 48
 definition of, 4
 dietary origin of, in urine, 17
 effect on cell division, 44, 45, 73-74
 on cell wall, 51-53
 on formation of fruits, 48-50, 74-75
 of gravity on formation of, 28
 on transport of, 28
 of light on activity of, 28, 29
 on synthesis of, 30
 on transport of, 81
 on plant respiration, 56
 on root formation in cuttings, 84
 on root growth, 59
 on uptake of water, 59, 60
 on wound growth, 82
 electrical polarity of plants and transport of, 24, 25
 extraction from roots, 44
 growth-inhibiting substances produced by, 38
 inhibitory effect on abscission, 42, 73
 on buds, 35-39, 72-73
 on roots, 39-42
 structure and, 37
 interaction of, 32, 33
 with biotin, 108
 with nutrients, 33
 with rhizocaline, 133
 with wound hormone, 44, 84
 isolation from enzyme preparations, 11
 from fungus cultures, 11
 from plant material, 18
 from urine, 11
 of growth-inhibiting, 37
 leaf growth activity of, 101, 102, 103
 mechanism of bud inhibition by, 35-39
 of cambium activation by, 46
 of parthenocarpic activity, 49, 50
 of polar transport of, 22-26
 modes of application for parthenocarpic, 49
 for root formation, 34
 nature of, 19, 61
 of inhibitory action, 37
 of weed-killing action, 43
 pH and inhibitory effect on root elongation, 39
 photoinactivation of, 28, 29
 protoplasmic streaming and, 56, 57, 58
 relation to lepto-hormone, 78
 to special plant hormones, 53, 54
 to tryptophan, 18
 relative activity for parthenocarpic, 49
 activities of, 11, 14
 role in tropisms, 26-31, 70, 72
 root formation and, 20, 34, 72
 seed germination and, 50, 51, 75
 source of, in bacterial infections of plants, 20
 in fungus cultures, 20
 sources, 3, 12, 13, 17-51, 98
 stimulating effect on cambium, 45-47
 structural requirements for activity, 15, 60
 synthetic, 13-17, 71
 technical uses, 70, 76
 toxicity of, 26, 43, 73
 transport through plants, 2, 3, 22-26, 72, 80 ff.
Avena, effect of iodoacetate on growth and respiration of, 55
 phototropism in, 2
 transportation of auxins through coleoptile of, 24
Avena test, for auxin activity, 4-7, 16, 22, 24, 26, 33, 37, 39, 40, 49, 97
 electrical modification of, 24
 specificity of, 13
 Azelaic acid, wound hormone activity of, 81
- B**
- Bacillus, effect of allatectomy on testis of, 140
Baeria chrysostoma, effect of temperature on flowering of, 86
 Bean pod test, for wound hormone activity, 78 ff.

- Bean pods, isolation of traumatic acid from, 80
 Benzofuran-3-acetic acid, relative auxin activity of, 14
 Bios II, plant hormone activity of, 109
 sources of, 109
 Biotin, interaction with auxin, 108
 plant hormone activity of, 104, 105, 108
 root formation and, 33
 sources of, 108
 Blastokolin, inhibitory effect on seedlings, 37, 40
 isolation from sorbus fruits, 37
 Blood, color change in crustaceans and, 170
 Bombyx, effect of corpus allatum on accessory sex glands of, 142
 Brain, as source of insect hormones, 127, 130, 164, 166, 167
 chromatophoretrophic factor in, of crustaceans, 175
 effect on metamorphosis in insects, 129, 130, 131
 endocrine activity of, 153
 relationship with corpus cardiacum, 153
 2-Bromo-4-chlorophenoxyacetic acid, growth activity of, and of its derivatives, 40
- C**
- Cabbage, isolation of auxin from, 19
 Calcium, effect on root formation, 33
 Calliphora, effect of castration on corpus allatum of, 140
 of corpus allatum on accessory sex glands of, 140, 142
 on egg development in, 144
Calliphora erythrocephala, reproductive organs of, 139
 Cambium, effect of auxins on, 45-47
 response to wounding, 82
 Carbohydrates, auxin action and, 61
 Carotene, effect on photoinactivation of auxin a and of its lactone, 29
 Carotenoids, plant hormone activity of, 129, 130
 Castration, effect on corpus allatum, 140, 141
 on secondary sex characters, 142, 143
 "Castration, parasitic," 165
 compared with X-ray castration, 175
 effect on crustaceans, 173-176
 on insects, 142
 Caulocaline, 122
 role in bud inhibition, 117, 118
 in stem growth, 53, 115-117
 Cell division, hormonal control of, in plants, 78
 Cephalaria test, for auxins, 7
 Cereal grains, nature of auxins in, 19
 Chironomus, effects of parasitic castration on, 142
Chironomus plumosus, organs of internal secretion, 163
Chlamydomonas eugametos, carotenoids in, 110
 Chlorophenoxyacetic acid, auxin activity of, and of derivatives thereof, 14, 17
 parthenocarpic activity of, 49
 Chlorophyll, role in the formation of flower-forming plant hormones, 93, 95, 96
 Choline, root formation and, 33
 Chromatophores, in crustaceans, activity of, 176, 177
 hormonal control of, 178-182
 Chymotrypsin, effect on isolation of auxin from plant tissues, 18, 19
cis-Cinnamic acid, auxin activity of, 17
 rate of transport of, 24
trans-Cinnamic acid, growth activity of, 39
 Cleome, effect of auxins on leaf growth of, 103
 Coconut milk, plant growth activity of, 116
 Colechicine, inhibitory effect on root elongation, 40
 reaction of insects to, 163
 Coleoptera, endocrine activity of corpus allatum in, 151

- influence of corpus allatum on development of, 131
- Coleus*, root formation in, 114
- Complex, glandular, of insects, neuroendocrine,
as source of GD hormone, 135
components of, 135
mechanism of, 135
- Corn, indoleacetic acid in, 19
isolation of growth-inhibiting auxins from, 37
of auxin precursors from; 20
thiamine distribution in, 124
- Corpus allatum,
as source of insect hormones, 128, 134, 138, 139, 150 ff., 153, 158, 163, 167
effect of castration on, 140, 165
on accessory sex glands, 140, 142
on blood color of melanoplus, 150
on color adaptation, 145, 146
on development of Lepidoptera, 129
on egg development, 143, 144
on gonads, 138
on metabolism, 166
on metamorphosis, 128, 129, 131, 136
on ovaries, 136, 138, 143, 165
on testis, 140
on tissue growth, 150
mode of action of implants of, 156
nature of hormones in, 142 ff.
relationship with reproductive organs, 142, 165-166
- Corpus cardiacum,
chromatophorotrophic activity of, of cockroaches on crustacean chromatophores, 190
effect on corpora allata, 153
on insect metamorphosis, 132, 133
physicochemical properties of chromatophorotrophic substance of, 158
relationship with brain, 153
as source of insect hormones, 134, 153, 164
- Corpus luteum, endocrine activity in insects, 152, 155
- Cosmos, effect of adenine on leaf growth of, 101
- Cosmos sulfureus*, photoperiodic induction of flowering, 87
- Cotyledons, as source of leaf growth substances, 101
- Coumarane-2-acetic acid, effect on root formation, 32
- Coumarin, growth inhibitory effect of, 37
- Crocetin, source of, 110
- Crocin, activity of, 110, 111
- Crocus, isolation of plant hormone from, 111
- Crown gall, auxin in, 20
formation of, 48, 70
- Crustaceans,
activities of the chromatophorotrophic hormones in, 185-187, 211-213
of retinal pigments in, 194-196
chemical nature of pigments in, 176
chromatophorotrophic effect in, of corpora cardiac extracts of insects, 146, 151, 153, 166
factor in brain of, 175
effect of eyestalk hormone on pigmentary behavior of, 181
of eyestalks on viability of, 204
of removal on growth of, 203
of hormones on color change in, 165-182
on molting, 200-204
on sex characteristics, 172-176
eyestalks as source of hormones, 178 ff., 200 ff.
hormonal control of retinal pigment movements in, 196-199
hormones in, 171-207
isolation of chromatophorotrophic material, 178 ff., 181
nervous control of retinal pigment migration, 213
number of chromatophorotrophic hormones in, 181, 185-187, 191, 192
of retinal pigments in, 194-196
ovary as source of hormones in, 175
parasitic castration in, 173-176
relation of hormones to seasonal sex characteristics of, 174, 175
response to removal of eyestalks, 180
to removal of sinus gland, 185
role of eyestalks in color change of, 178 ff.
of sinus gland in, 176, 182-187, 213

- source of hormones in, 175, 176, 187 ff.
 X-ray castration compared with parasitic castration of, 175
- Cucurbits, transport of fluorescein through, 24, 25
- Cuttings, effect of auxin on rooting of, 31-34
- Cyanide, inhibitory effect on plant growth and respiration, 54
- Cyclohexaneacetic acid,
 auxin activity of, 15
 growth activity of, 13
- Cyclohexylideneacetic acid, auxin activity of, 15

D

- Decane-1,10-dicarboxylic acid, wound hormone activity of, 81
- Δ^1 -Decene-1,10-dicarboxylic acid, identity with traumatic acid, 80
- Δ^2 -Decene-1,10-dicarboxylic acid, as isomer of traumatic acid, 81
 wound hormone activity of, 81
- "Deseeded" test for auxins, 7
- Diastase, effect on root formation, 31
- 2,4-Dichlorophenoxyacetic acid, auxin activity of, 14, 17, 39
 effect on flowering of pineapple, 98
 toxicity of, 43
 use in weed-elimination, 43
- Dictyuchus monosporus*, hormonal control of sexual reaction in, 119
- Dictyostelium discoideum*, chemical nature of aggregation stimulus in, 120
- Diptera,
 endocrine activity of corpus allatum in, 151
 of brain in, 151
 source of hormones in, 152
- Diptera, muscoid, ring gland as source of hormones in, 131, 132, 137, 151, 153
- Dixippus, 128
 effect of corpora allata on ovaries of, 139
- Dixippus morosus*, color adaptation in, 145, 146
- Drosera, transport of amino acids through, 24

- Drosophila*,
 effect of corpus allatum on egg development in, 144
 role of α -hydroxytryptophan in eye pigment formation in, 148
- Drosophila hydei*, 133
 effect of corpora cardiaca implants on larvae of, 153
- Drosophila melanogaster*,
 eye color hormones of, 147, 148, 149
 source of hormones in, 150
- Dytiscus,
 effect of castration on corpora allata of, 141
 of corpora allata on ovaries of, 138, 139, 144

E

- Endosperm, auxin precursor in, 50
- Enzymes,
 auxin-inactivating, in pea plant, 13, 15, 49
 effect of proteolytic, on isolation of auxin from plant tissue, 18, 19
 growth activity of hydrolytic, 3, 52
 isolation of auxin from preparations of, 11
 plant growth and, 55
- Ephestia kühniella*, eye color hormones in, 146, 147, 148
- Estradiol, plant hormone activity, 109
- Estrogens, plant hormone activity, 109
- Ethylene, effect on transport of auxin, 27
- Ethylene chlorhydrin, effect on inhibited buds, 38
- Eyes, endocrine activity of, in insects, 152
- Eyestalks,
 as source of chromotrophotropic material, 178 ff., 183
 of hormones in crustaceans, 197
 effect of extracts of, on heart-rate in crustaceans, 205
 on viability of crustaceans, 204
 hormonal activity of, in crustaceans, 176
 reproduction and, 211
 response of crustaceans to removal of, 179, 181, 200 ff., 203, 206
 sinus gland as source of hormonal activities of, 206, 213

F

- Fat body, of insects,
 endocrine activity of, 152, 155
- Ficin, liberation of auxin by, 19
- Florigens, see also Flower-forming "hormone," 85, 112
- Flower-forming "hormone," 85-99, 121-122
 antagonism to auxin, 97 ff.
 attempted isolation of, 91
 formation of, 93, 95, 96
 frost resistance and, 87
 leaves as receptors of, 88
 relation of chlorophyll to, 93, 95, 96
 to photosynthesis, 93
 specificity of, 92, 93
 transport of, 88, 90, 91, 92, 122
- Flowering,
 factors influencing, 86-99
 photoperiodic induction of, 86
- Fluoreneacetic acid, effect on root formation, 32
- Fluorescein, transport through cucurbits, 24, 25
- Fluoride, effect on growth and respiration of plants, 54
- Folliculin, effect on insects, 141
- Frazinus ornus*, cambial stimulation in, by auxin, 82
- Frost resistance in plants, photoperiodic stimulus and, 88
- Fruits, effect of auxin on formation of, 48-50, 74-75
 formation of seedless, by auxin application, 49
- Fungi, hormone-like substances in, 118 ff.
 isolation of auxins from, 11
 nature of hormone-like substances in, 120
 phototropism of, 29

G

- Gastroliths, effect of sinus gland on formation of, in crustaceans, 201, 203
- Geotropism,
 inhibitory effect of auxin on root elongation as explanation of, 41, 42

- nature of, 2, 27
 of roots, 30
- Glands, pericardial, of insects, endocrine activity of, 152, 155, 165
 prothoracic, of insects, endocrine activity of, 131, 134, 155, 164, 165, 167
 ventral, of insects, endocrine activity of, 152, 155
- Glucose-1-phosphate, reversal of fluoride effect on plants by, 54
- Glutamic acid, effect on activity of traumatic acid, 81
- Glycine, root-forming activity of, 114
- Gonads, effect on fat metabolism, 211
 endocrine activity in insects, 152, 155
- Gravity, effect on auxin formation, 27
 on auxin transport, 28
- Growth,
 effect of sinus gland on, 213
 relation between respiration and, of plants, 54-56
 between uptake of water and, of plants, 59, 60
- "Growth and Differentiation Hormone," see Hormones in insects, GD hormone

H

- Helianthus*, auxins in, 13
- Helianthus annuus*, 92
 growth activity of pyridoxine for, 107
- Helianthus tuberosus*, 92
 auxin and growth of, 44, 45
- "Hemiauxins," root formation and, 33
- Hemiptera, endocrine activity of brain in, 151
 of corpus allatum in, 128, 151
 insect hormone and molting of, 127, 128
 source of molting hormone in, 127
- Heteroauxin, identity with indoleacetic acid, 13
- Hexenal, isolation of, 84
- Hibiscus, root-forming factor in leaves of, 114
- Honey, estrogenic activity in vertebrates, 144
- Hormone, flower-forming, see Flower-forming "hormone"

- Hormone A of fungi, effect of organic acids on production of, 120
inactivation of, 120
isolation of, 120
- Hormone B of fungi, 120
- Hormone C of fungi, 120
- Hormone D of fungi, 120
- Hormone-like substances in fungi, 116-121
- Hormones in crustaceans, 179-207
- chromatophorotrophic, 166
 - activity of, 185-187
 - chemical properties of, 194
 - number of, 181, 185, 187, 194
 - phylogenetic distribution of, 192
 - properties of, 192
 - effect on blood sugar, 206
 - on color change, 176-182
 - on heart rate, 205, 206
 - on locomotor activities, 206
 - on ovarian development, 206, 207
 - on sex characteristics, 172-177
 - on viability, 205, 206
 - factors controlling secretion of, 193
 - retinal pigment, eyestalk as source of, 198, 199
 - relation to chromatophorotrophic hormones, 199
 - sources of, 172, 175, 178 ff., 183, 184, 187 ff., 194, 197, 198, 200, 202-204
- Hormones in insects, 125-167
- action mechanism, 126
 - corpus allatum, nature of, 158 ff.
 - effect on color change, 125
 - on postembryonal development, 126-138
 - on reproduction, 138-145
 - eye color, chemical nature of, 148
 - sources of, 147 ff., 152
 - eyestalk, effect on pigmentary behavior, 181
 - GD hormone, action of, 135, 136, 156, 163, 167
 - assay, 163
 - effect on metamorphosis of muscoid diptera, 132, 133
 - on molting, 134
 - interaction with juvenile hormone, 137
 - physicochemical properties, 157
 - source of, 134, 140, 151, 164, 165, 167
 - "gene," components of, 147-149
 - extraction of, 157
 - mode of action, 146, 149, 157, 167
 - nature of, 146
 - relation to kynurenine, 148, 149, 158
 - source of, 152, 155
 - juvenile hormone, interaction with GD hormone, 137
 - mode of action, 133, 134, 136, 137, 156
 - source of, 134, 135, 137, 151, 163
 - molting hormone, source of, 127
 - molt-inhibiting hormone, relation to chromatophorotrophins, 202
 - sinus gland as source of, 200, 202-204
 - sources of, 127 ff., 131, 134, 135, 150-158, 163
 - specificity of, 155
 - tissue response to, 155
- Hormones in plants, see also Auxins, Caulocaline, Flower-forming hormones, Rhizocaline, 1-123
- carotenoids as, 129, 130
 - effect on leaf growth, 100-103
 - plant growth, 1-70
 - definition of, 3, 4
 - nicotinic acid as, 108
 - pyridoxine as, 107, 108
 - root-forming, source of, 31
 - sources of, 111
 - special, in plants, 53
 - steroids as, 109
 - vitamins as, 104-109, 113
 - wound, in plants, 78-85, 121
 - assay of, 78-80
 - chemical nature of, 80-82
 - chemical structure and activity of, 81
 - interaction with auxins in cell division, 44
 - secretion of, by wounded vegetal cells, 78
- 3-Hydroxykynurenine, 167
- α -Hydroxytryptophan, role in eye pigment formation of *Drosophila*, 114
- Hymenoptera, endocrine activity of brain in, 151
- source of hormones in, 152

- Hyoscyamus niger*, 89, 93
 effect of defoliation on flowering of, 98
 of nutrients on flowering of, 96
- I
- Impatiens, effect of carotene on root formation of, 110
 root formation in seedlings of, 113
- 3-Indèneacetic acid,
 auxin activity of, 13
 effect on root formation, 32
- Indican, auxin activity of, 15
- 3-Indoleacetaldehyde, conversion to indoleacetic acid, 21
- 3-Indoleacetic acid,
 antiflowering action of, 97
 antivitamin activity of, 19
 auxin activity of, 12, 16, 17, 26, 44, 46, 50
 derivatives of, 13, 16
 biogenesis, 70
 chemistry, 71
 conversion of tryptophan into, 20, 21
 dietary protein as source of urinary, 18
 distribution in higher plants, 13
 effect on flowering of pineapple, 98
 on root formation, 32, 50, 114
 gall-like swellings arising from, 48
 inactivation of, 13, 15, 30
 inhibitory effect on buds, 35
 interaction with auxin a, 33
 with naphthaleneacetic acid, 33
 with phenylacetic acid, 33
 isolation from plant material, 18
 from *Rhizopus suinus*, 12
 occurrence in corn, 19
 rate of transport of, 24
 wound hormone activity of, 80, 82
- 3-Indolebutyric acid,
 auxin activity of, 13, 14
 of derivatives of, 16
 effect on root formation, 32
 interaction with naphthaleneacetic acid, 33
 parthenocarpic activity of, 49, 50
 rate of transport of, 24
- 3-Indolecarboxylic acid,
 effect on root formation, 32
 growth activity of, 44
 relative auxin activity of, 14
- α -(β -Indole)-propionic acid, auxin activity of, 17
- Indolepyruvic acid, possible intermediates in the conversion of tryptophan to, 21
- Inhibitory hormone, see Hormones in insects, juvenile hormone
- Insects,
 chemical nature of eye color hormones in, 148-150
 endocrine control of color reactions, in, 145, 166
 of postembryonic development of, 126-138, 163
 estrogenic action in invertebrates of material derived from, 144
 hormones in, 125-167
 nervous control of pigmentary movements in eye of, 166-167
 phases of postembryonic development of, 126, 127, 137
 sex hormones in, 144, 145, 165, 166
 source of eye color hormones in, 147
 synthesis of tryptophan in, 167
- Intermedin, relation to crustacean hormones, 193, 194
- Iodoacetate,
 effect on growth and respiration of *Neurospora*, 55
 of plants, 54
 on water uptake in plants, 60
 reversal of effect on plants by organic acids, 54
- Isopods, mechanism of color change in, 212
- K
- Kidney bean, see *Phaseolus vulgaris*
- Kynurenine,
 relation to "gene hormones," 148, 149, 158
 role in eye pigment formation of *Drosophila*, 148, 149
 source of, 149
- L
- Leaf growth substances, 122
 sources of, 101 ff.

- Leaves, antiflowering action of, 98
 as receptors of photoperiodic stimulus, 87
 as source of auxin, 38, 98
 effect of light on growth of, 100
 on root formation of cuttings, 33
 flower-forming action of, 97, 98
 formation of thiamine in, 124, 125
 growth inhibitory effect of, 38
 root-forming factor in, 33, 114
 substances promoting growth of, 101-103
 thiamine content of, 105
- Lemna, isolation of auxin from, 19
- Lepidoptera,
 effect of corpus allatum on development of, 129
 endocrine activity of brain in, 151
 of corpus allatum in, 129, 151
 of prothoracic glands in, 151
 source of hormones in, 152
- Leptohormone,
 cell division in plants and, 78
 possible identity with auxin, 78
- Leucophaea,
 effect of allatectomy on metamorphosis of, 136
 on testis of, 140
 of castration on corpus allatum in, 140
 of corpus allatum on accessory sex glands of, 140-142
 on egg development in, 144
 hormonal control of postembryonic development of, 156
- Leucophaea maderae*,
 effect of corpus allatum on ovaries in, 138
 source of hormones in, 154
- Light, see also Photoperiodism
 effect of carotene on inactivation of auxin by, 29
 on auxin activity, 28, 29
 content of roots, 42
 on growth of leaves, 100
 on protoplasmic streaming, 86, 87
 on transport of auxin, 24, 28
- Lilac, isolation of growth-inhibiting auxin from leaves of, 37
- Lucilia, effect of castration on corpus allatum of, 140
 of corpus allatum on accessory sex glands of, 140
- Lycopus, inhibitory effect of indoleacetic acid on flowering of, 97
- M
- Magnesium inhibitory effect on root formation, 33
- Maleic acid, wound hormone activity of, 81
- Megaloptera, hormonal control of post-embryonic development of, 131
- Melandrium dioecium*, effect of sex hormones on sex of, 110
- Melanoplus,
 effect of cardiacectomy in, 153
 of castration on corpus allatum of, 140
 of corpus allatum on accessory sex glands of, 140, 142
 on blood color of, 150
 metabolic hormone in corpus allatum of, 143, 144
- Melanoplus differentialis*, 130
 effect of corpora allata on ovaries of, 138
- Metabolism, fat, gonads and, 211
- 2-Methyl-4-chlorophenoxyacetic acid,
 growth activity of, and of derivatives thereof, 40
- 2-Methyl-4-fluorophenoxyacetic acid,
 growth activity of, 40
- Methylnaphthalene acetate, inhibitory effect on buds, 38
- 4-Methylthiazole-5-acetic acid, effect on root formation, 32
- Microorganisms,
 conversion of tryptophan to indoleacetic acid by, 20
- Mimosa pudica*,
 isolation of wound hormone from, 81
- Molting, effect of hormones on, in crustaceans, 200-204
 in insects, 127 ff., 134, 165
- Mucor mucedo*, hormonal control of sexual reactions in, 119

N

- 1-Naphthaleneacetamide,
auxin activity of, 16
- Naphthaleneacetic acid,
effect on flowering of pineapple, 98
gall-like swellings arising from, and its
derivatives, 48
growth activity of, 44
inhibitory effect on buds, 36
interaction with indoleacetic acid,
with indolebutyric acid, 33
rate of transport of, 24
- 1-Naphthaleneacetic acid, auxin activity
of, 13, 14, 16
- α -Naphthaleneacetic acid, effect on root
formation, 32
- Naphthaleneacetonitrile, auxin activity
of, 16
- Naphthalene-1-nitro-(aci)-methane,
auxin action of, 16
- Naphthoxyacetic acid,
effect of, and its derivatives on root
formation, 32
parthenocarpic activity of, 49
- Naphthylacetamide, effect on root for-
mation, 32
- Naphthylmethylsulfonic acid, effect on
root formation, 32
- 1-Naphthylnitromethane,
auxin activity of, 15
- Nervous system,
central, as source of chromatophoro-
tropins in crustaceans, 177-192
endocrine activity of neurosecretory
cells in, 127, 153, 166
color change and, 166, 212
- Neurospora, effect of iodoacetate in
growth and respiration of, 55
- Nicotinic acid,
distribution in plants, 108
effect on root formation, 33
plant hormone activity of, 108
transport through plants, 108
- Nitrates, effect on root formation, 33
- 5-Nonanol-1,9-dicarboxylic acid, wound
hormone activity of, 81
- 5-Nonanone-1,9-dicarboxylic acid, wound
hormone activity of, 81
- Δ^1 -Nonene-1,9-dicarboxylic acid, wound
hormone activity of, 81
- Δ^2 -Nonene-1,9-dicarboxylic acid, wound
hormone activity of, 81
- Nyctoperiod, 81

O

- $\Delta^{1,7}$ -Octadiene-1,8-dicarboxylic acid
wound hormone activity of, 81
- Δ^1 -Octene-1,8-dicarboxylic acid, wound
hormone activity of, 81
- Orthoptera,
effect of fat body on egg maturation in,
139
endocrine activity of corpus allatum in,
128, 129, 151
of corpus cardiacum in, 151
source of hormones in, 152
- Ovaries,
effect of corpus allatum on, of insects,
138
of sinus gland on, 211

P

- Pantothenic acid,
distribution in plants, 108
plant hormone activity of, 108
sources of, 108
transport through plants, 108
- Parthenocarpy, auxins and, 49, 50
- Pea plants, auxin-inactivating enzyme in,
13, 15, 49
- Peas, leaf growth substances from diffus-
ates of, 101, 102
- Perilla nankinensis*, 89, 90
- Perilla ocymoides*, 90
- Phalaris, phototropism in, 2
- Phaseolus, transport of auxin through
seedlings of, 28
- Phaseolus vulgaris*,
hormones from, 78
substances promoting root formation
in, 113
- Phenoxyacetic acid,
auxin activity of, 17
effect of, and its derivatives on root
formation, 32

- Phenylacetic acid,
 effect on root formation, 32
 interaction with indoleacetic acid, 33
 mobilization of rhizocaline by, 115
 relative auxin activity of, 14
- Phenylbutyric acid, 21
 growth activity of, 14
 relative auxin activity of, 14
- Photoinactivation, see also Light
 carotene and, of auxin, 28, 29
 of indoleacetic acid, 30
- Photoperiodism, 86 ff.
- Phototropism, 2, 22, 28-30
 detection in seedlings, 22
 in fungi, 24
 nature of, 2
- Phycomyces, indoleacetic acid in, 29
- Phycomyces blakesleeanus*,
 effect of histamine on, 119
 of thiamine on, 105, 119
 hormonal control of sexual reactions
 in, 119
- Phytohormones, definition, 4
- Phytomonas tumefaciens*, auxin content of
 galls arising from, 48
- Picrocrocin, hormone activity of, 111
- Pigments, chemical nature of, in crusta-
 ceans, 176 ff.
- Pineapple, effect of auxins on flowering
 of, 98
- Pisum,
 auxins in, 13
 indoleacetaldehyde in, 21
- Plant, growth hormones, see Hormones,
 plant growth tissues, extraction of
 auxins from, 18
- Plants,
 auxin and wound growth in, 82
 produced in bacterial infections of,
 20, 48
 distribution of pantothenic acid in, 108
 of pyridoxine in, 107
 of thiamine in, 105
 effect of auxin on respiration of, 56
 of defoliation on flowering of, 98
 of enzymes on growth of, 55
 of iodoacetate on water uptake, 176
 of sugars on water uptake, 60
 electrical polarity and transport of
 auxin through, 24-26
 factors involved in stem growth of,
 116 ff.
 hormonal control of cell division in, 78
 hormone excretion in injured, 78
 inhibitory effect of auxin on flowering
 of, 96-99
 isolation of auxins from, 18, 19
 "laziness" of, 27, 30
 long-day, 86, 87
 mechanism of auxin transport through,
 22-26
 physiology of wound growth in, 82
 reaction to wounding, 78-84
 relation between growth and respira-
 tion in, 54-56
 and salt uptake in, 60
 and water uptake in, 59-61
 role of thiamine in, 107
 short-day, 86, 87
 transport of amino acids through, 24, 25
 of pantothenic acid through, 108
 of pyridoxine through, 108
 of thiamine through, 106
 tropisms in, 2, 22, 28-30, 70
- Poa alpina*, growth activity of estrone for,
 128
- Pollen, bud inhibition by, 35
 isolation of auxin from, 48
- Populus balsamifera*, effect of wounding
 on, 83
- Potato, dormancy of, 37
- Proline, leaf growth activity, 101
- Protein-auxin complexes, 19, 60
- Proteins,
 dietary, as source of auxins in urine, 18
 purified wheat, as source of auxin, 18
- Protoplasm,
 effect of auxin on streaming of, 56, 57,
 61
 relation between growth of plants and
 streaming of, 56
- Pseudoauxin a,
 activity of, 15
 conversion of auxin a into, 12
- Ptychopoda seriata*, eye color pigments in,
 148
- Pupation, endocrine control of, 129-132
- Purines,
 effect on root formation, 113
 leaf growth activity of, 101

- Pyridoxine,
 bioassay in plants, 125
 distribution in plants, 125
 plant hormone activity of, 107, 108
 source of, 108
 transport through plants, 108
- Pyrimidine, plant hormone activity, 105
- R**
- Radishes, isolation of auxin precursor from, 20
- Raphanus, transport of auxin through seedlings of, 28
 "Redwood," 46
- Reproduction of insects, effect of hormones on. 138-145
- Reproductive organs,
 effect of corpora allata on accessory, 140, 142
 on corpora allata, 140, 141, 144
- Respiration, relation between growth of plants and, 54-56
- Rhizocaline, 33, 113-115, 122
 activation of, 115
 as root-forming hormone, 53, 113
 distribution of, 115
 interaction with auxin, 114
- Rhizopus suinus*, isolation of auxin from cultures of, 11, 12, 31, 38
- Rhodnius, effect of corpus allatum on accessory sex glands of, 140
 on egg development in, 144
 hormonal control of postembryonal development of, 156
- Rhodnius prolixus* effect of corpora allata on ovaries of, 138
 source of hormones in, 154
- Riboflavin,
 plant hormone activity of, 108
 sources of, 108
- Rice, effect of polishings of, on rooting, 31
- Ring gland,
 as source of developmental hormones in muscoid diptera, 131, 132, 134, 137, 165
 of GD hormone, 140
 effect of implants of, on testis of *Drosophila*, 140
 on ovaries, 138, 155
 nature of hormones in, 143
- Roots,
 effect of auxin on, 30, 31, 39-42, 84
 of carotene on formation of, 110
 of light on auxin content of, 42
 of nutrients on formation of, 33
 of pyridine on, 107, 108
 of thiamine on growth of, 106, 107, 113
 of tryptophan on formation of, 20
 of vitamins B on formation of, 33
 factors involved in formation of, 114
 geotropism of, 30, 41, 42
 growth activity of nicotinic acid for, 108
 inhibitory effect of calcium on formation of, 33
 of magnesium on formation in, 48
 mechanism of nodule formation in, 48
 methods of auxin application to, 34
 nitrogenous substances required for formation of, 113
 promotion of stem growth by, 116
 thiamine content of, 105
 tissues producing, 34
- Royal jelly, gonadotrophic substance in, 139
- S**
- Safranal,
 hormone activity of, 111
 source of, 110
- Salt, uptake of, and growth of plants, 60
- Sapromyces reinschii*,
 hormonal control of sexual reaction in, 119
- Sarcophaga,
 effect of castration on corpus allatum in, 140
 of corpus allatum on accessory sex glands of, 140, 142
- Scabiosa atropurpurea*, effect of color of light on flowering of, 28
- Sebacic acid, wound hormone activity of, 81
- Seeds, effect of auxins on germination of, 50, 51, 75
- Sex hormones,
 effect on sex of *Melandrium dioecium*, 110

- growth activity for plants, 109
 in insects, 144, 145, 166
 Sinus gland,
 as source of hormones in crustaceans,
 197, 198, 202-204, 206
 chromatophorotrophic activity of, 183-
 185
 effect on formation of gastroliths, 201,
 202
 on growth, 213
 on molting, 200 ff., 203, 213
 on ovarian development, 207, 211
 eyestalks and, 213
 hyperglycemia and, 213
 number of chromatophorotrophic hor-
 mones in, 194
 response of crustaceans to removal of,
 185
 site of, 182
 structure of, 183
 Skotoperiod, 91
 Sodium glycocholate, effect on transport
 of auxins, 25
 Sorbus, isolation of blastokolin from
 fruits of, 37
 Spinach, isolation of auxin from, 19
Spinacia oleracea, effect of color of light
 on flowering of, 94
 Statoliths, 28
 Steroids,
 occurrence in plants, 110
 as plant growth substances, 109, 110,
 122
 Stimulus, flower-forming, nature of, 98
 photoperiodic, hormonal nature of,
 90-92
 Structure, chemical,
 auxin activity and, 15, 39
 inhibitory effect of auxins and, 37
 plant hormone activity of vitamins
 and, 105
 wound hormone activity and, 81
 Stylopization, 142, 144
 Suberic acid, wound hormone activity of,
 81
 Succinic acid, wound hormone activity
 of, 81
 Sugar, effect on rooting, 31, 33
 on water uptake in plants, 60
 Sugar cane, isolation of growth inhibitory
 auxin from, 37
- T
- Testis, effect of corpora allata on, 140
 Thiamine, distribution in plants, 105 ff.
 effect on root formation, 33
 formation in leaves, 106, 107
 leaf growth activity of, 101
 plant hormone activity of, 104-107
 transport through plants, 106
 Thiazole, plant hormone activity of,
 105
 Tissues, response of insect, to hormonal
 stimuli, 133, 136
 Tomatoes, growth activity of pyridoxine
 for, 107
 isolation of growth-inhibiting auxin
 from, 37, 40
 thiamine distribution in, 106
 Tradescantia, effect of auxin on root
 formation, 32
 Traumatic acid, 79 ff.
 cofactors of, 80
 effect of glutamic acid on activity of,
 81
 formation of, 84
 identity with Δ^1 -decene-1,10-dicar-
 boxylic acid, 80
 interaction with auxin, 84
 isolation from bean pods, 80
 isomer of, 81
 Traumatins, see Traumatic acid
 Δ^1 -Tridecene-1,13-dicarboxylic acid,
 wound hormone activity of, 81
 Δ^2 -Tridecene-1,13-dicarboxylic acid,
 wound hormone activity of, 81
 Triiodobenzoic acid, antagonism to auxin,
 97
 Tropaeolum, leaf abnormalities in, 103
 Tryptamine,
 auxin activity of, 16
 conversion to auxin, 21
 to indoleacetic acid, 20, 21
 relation to auxin, 18
 role in eye pigment formation of
 Drosophila, 148, 149
 Tryptophan, synthesis in insects, 167
 Tumors, plant, formation of, 70

U

- 6-Undecanol-1,11-dicarboxylic acid,
wound hormone activity of, 81
 Δ^5 -Undecene-1,11-dicarboxylic acid,
wound hormone activity of, 81
 Urine, dietary origin of auxin in human,
17, 18
 extraction of auxin from, 31

V

- Vicia, auxins in, 13
Vicia faba, hormones from, 78
 Vitamins, as plant hormones, 104-109,
122
 leaf growth activity of, 101
 structural requirements for plant hor-
mone activity, 105

W

- Water, relation between growth of plants
and uptake of, 59-61
 Wheat, purified proteins of, as source of
auxin, 18
 Wound callus, formation in plants, 78
 Wound hormone, see Hormones, wound,
in plants

X

- Xanthium pennsylvanicum*, 95
 day-lengths required for flowering, 86

Y

- Yeast, plant hormone activity of, 104,
116

Z

- Zygomycetes, hormonal control of sexual
reactions in, 119
